INTRODUCING QPI's Ruggedized Display Line

QPI develops custom customer solutions using Commercial Off The Shelf (COTS) equipment for multiple applications used within naval and commercial markets worldwide.

We provide ruggedized displays that use QPI in-house developed software which combines integrated customer/OEM specific software with specified physical interfaces.

Displays

Multi-Function

Current Naval & Commercial Applications:

- Remote Alarm Panels
- Navigation (Speed, Heading, Roll, Pitch, Shaft RPM, Wind, Meteorological, local and UTC time, latitude/longitude, and more)
- Compass and Heading switchover
- OEM Systems CDU/Control/Interface
- Machinery Control

And more...

- Military Quality
- Ruggedized Marine
- Commercial Ships
- Touch Screen
- Software Solutions
- Windows / Linux
- Many screen sizes

Our biggest successes have come from designing the end product with specific hardware interfaces and mounting options that meet the stringent military environmental and shipboard requirements. We help our customers decide on specific hardware interfaces coupled with our custom interface connector plate. This combination creates an anti-tamper product ensuring the unit remains sealed against the harsh military environments and cyber intrusion.

Always being price conscience, we work closely with our customers so product over-designing does not occur. Another concern we have addressed from our customers' is reliability and quality. Our products are designed and proven with high Mean Time Between Failures (MTBF). QPI also is compliant ISO 9001:2008 procedures to ensure the manufacturing and development procedures are adhered to in the highest quality standard.

In addition to customization, price, reliability and quality is configuration management. QPI assigns a customer specific part number to each of our products and the BOM is locked down and established by each hardware component and software build and version number. This will ensure the customer gets exactly what they are expecting every time.

In today's world obsolescence is a constant concern with new technology. Many times a product goes obsolete by the time it hits the shelf. QPI has partnered with suppliers who guarantee their products will be available for at least seven years and in many cases, much longer. Even if there is a change due to obsolescence, QPI will receive the updated technology upgrade, test it, and make sure that it does not affect form, fit or function of the original product. QPI –Reliable products with Rapid service!

Indoor / Outdoor Touch Screen
